Innovative Products

The field of Homeland Security is inundated with a bewildering range of technologies, including everything from smart video, biometrics, millimeter wave and backscatter, to varying detection equipment such as biological, chemical and explosive.

To enhance our readers' familiarity with new technologies and products, a committee at SSI has chosen to highlight the following products in this, the Innovative Products section.

Henry Morgenstern

President

Security Solutions International (Publisher)

ALPHA ONE KNIFE

The H3 Alpha One is one of the first knife creations of the Pohl Force Company. Dietmar Pohl, 15 year veteran of the Solingen knife industry, designed the Alpha One in collaboration with U.S. and German special operations personnel. The 9.9 ounce knife features a 4.5 inch 440C blade. Each knife comes with a certificate featuring the individual knife's serial number, control date and signature of Dietmar Pohl. He personally examines each knife prior to shipping. www.grouph3.com/knives.html

EXPLOTRAIN EXPLOSIVE BLAST SIMULATORS

Explotrain simulators are designed to be a realistic, cost effective and safe method for simulating a variety of explosive device threats. The Simulators are computer controlled, gas powered and operated by remote transmitters, triggering devices or computer

interface. They can be used to simulate improvised explosive devices, unexploded ordnance, and indirect fire such as artillery. These simulators are intended to be safe to use near buildings, windows and personnel (with reports up to 130 decibels) and an operating cost of only 10 cents per shot. www.explotrain.com
